Patch for Apache-Ant Bug 34464 (Ant v1.6.2)	What is this bug
| ```
+  int i = -k.length();
-    while (s.indexOf(k) == -1) {
+  while (i++<0 || s.substring(i).indexOf(k)==-1)
        {s.append (nextchar());}
``` | *String::indexOf(*String *sub*) looks for sub-string *sub* from the beginning of a string s. |
| **A PPP we found in the latest version of Struts** | If program has already compared the first N characters of *s* with *sub*, it is better not to repeat this. |
| ```
    while (1) {
-    n = s.indexOf("%\\>");
+    n = s.substring(n+2).indexOf("%\\>");
    if (n < 0) break;
    ... // replace "%\\>" by "%>" and continue
  }
``` | **The Struts PPP is already confirmed and patched by Struts developers based on our report** |
